

AMSYS Technologies

AMSYS has been successfully doing apart from Projects handling, Consulting Services in areas like: SAP, Oracle and all those core areas of any business to be successful. We not only execute the project, but also integrate systems, train, maintain and upgrade them for smoother operations and help provisioning and effective workflows for better results by effective control risks and compliance.

What We Do

SAP IDM

SAP IDM plays a vital role by establishing who is and what is doing and establishes direct relationship between the company and its employees hence is a very vulnerable link which needs securitizing and strengthening by proper and appropriate security measures.

SAP GRC

SAP GRC related hunger has made us one of the sought after service providers as our team has very large appetite for Governance, Risk and Compliance of SAP. We have done in and out research, trouble shooting, project executions. We are proud to say that we are unmatched in SAP including the GRC.

SAP Security

From the start, we are technically savvy on SAP let be it Security, GRC, IDM lets know little more... SAP Security in nutshell is the ways of securitizing SAP as a whole, our team is specialized in looking into the safety issues like authorizations, firewalls, encryptions, trouble shooting etc.

Consulting Services

Password Management
/ SSO

User Life Cycle
Management

Business Role & Privilege
Management

Provisioning / Approval
Workflows

What Our Client Say

We are partnering with AMSYS technologies in our enterprise IT landscape for more than half a decade and today we are confident that they can handle the landscape as per our ever changing requirement and need efficiently

Tony John
Project Manager

Our working relationship is excellent. We have daily interaction with a good bunch of guys who are very knowledgeable about our industry and SAP. The support they provide is highly tailored to our needs.

Delaware
